

ABSTRACT OF THE DISCLOSURE

A drawer type door opening/closing structure for a refrigerator is provided. The structure includes, a door for selectively opening and closing a storage space in a refrigerator body, at least one support frame hingedly connected to a rear surface of the door to allow the door to pivot about the lower end of the door, at least one movable rail formed on the support frame, and at least one guide rail formed on an inner surface of a side wall of the refrigerator body to be engaged with the movable rail and guide movement of the support frame. The structure facilitates the placement in or removal of an object from the storage space, reduces the possibility of accident, and prevents the refrigerator from being broken.
